

HIGHWAY DATA SOFTWARE PROJECT RFP # 16-003
REQUESTS FOR INFORMATION
(RFI)

RFI # 001:

Will this project use the traditional “waterfall” development process?

Response:

The Town encourages vendors to submit proposals that incorporate agile approaches to software development. Examples of agile methods and concepts as employed in the public sector are documented in the [18F¹ guides²](#), especially guidance on [agile methods³](#) and [design methods⁴](#). The Town is especially interested to receive proposals that utilize agile methods in implementation plan and cost structure. While these methods are preferred and may result in a stronger score, the Town will consider any software development approach, including “waterfall”, that conforms to requirements defined in the RFP.
